2

Could you make a double dose application instead of two with the recommended dose?

Our recommendation is based on the results of scientific and technical trials. To get the best effectiveness, follow the recommendations provided.

3

How much water should I use to make the application of LaVigne AROMA?

Dilute the product in about 10 times its weight in water to put into suspension. Add additional water to the spray tank to meet the minimum amount of water that allows for a homogeneous spray. Avoid excess water that can cause loss of product by dripping from leaves.

Water acts as the treatment vehicle, what is most important is the amount of product used for the desired acreage.

4

Can I mix LaVigne AROMA with other products?

Avoid mixing when possible.

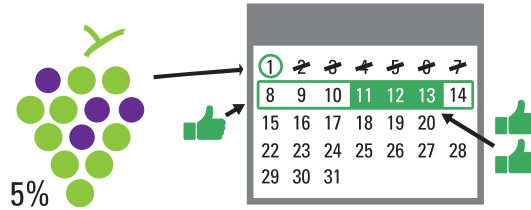

Do not mix with oils, alkaline products and lime sulfur solutions.

No incompatibilities with other products have been found. In case of tank mixing, check the recommendations of the other product used and perform a phytotoxicity test before making first application.

5
